Sub B' 7
13. (Amended) A fan guard to be mounted beside a rotor device of a heat-dissipation fan for supporting said rotor device and supercharging said fan, comprising:
a main frame; and
a set of guard blades radially arranged inside said main frame and fixed onto an inner surface of said main frame by [each] one ends thereof;
wherein said guard blades are arranged downstream of [said] rotor blades of
AI said rotor device, and have a shape substantially identical to that of said rotor blades, and an arrangement relative to said rotor blades allowing any one of said guard blades and any one of said rotor blades to constitute a near letter C configuration in a cross-sectional view at a moment that a leading point of said guard blade aligned with a trailing point of said rotor blade in an axial direction so as to transform a tangential velocity of an air outflow from said rotor device [to be transformed] into a static pressure.
